

How to connect to your SQL Server database

Radim Bača

September 22, 2014

The database run on a dbsys.cs.vsb.cz server. Every student should already have a database there. You probably received an email about your SQL Server account.

You will use the SQL Server Management Studio (SSMS) which is available on every computer lab. SSMS is a part of SQL Server installation, which can be downloaded by students on the elms.cs.vsb.cz (if you want to install it on your computer). You can see the login window on a picture. Enter your login and use password that you received in the email.

It is possible to open a script window after connection using the 'New Query' icon. All commands in the script can be executed by a F5 (or Execute icon). If we highlight only few commands and press F5 then only highlighted commands are executed.
